JANUARY 2022

Arwen Isaac Dave´

From Piner, to New York, to NASA

Arwen Isaac Dave´
PHS Class of 1984

Editor's note: We want to thank Arwen (Isaac) Dave´ for taking on our request at the last minute to write about her journey from growing up in Santa Rosa to working at NASA. She is a skilled writer/story Teller and Engineer. She especially wants to thank all of her elementary and high school teachers and friends who guided and supported her throughout her journey. Despite her many successes through hard work, she remains a very modest and humble person.

My parents traveled to San Francisco from Fulton in 1965 in order for me to be born in a hospital there. Even though I was born in that big city, I was raised on a farm in

Fulton, a couple of miles from Piner High School. I have always felt most at home out in the middle of nowhere, where I can see the far horizon or the Milky Way.

Like many of my elementary school classmates, I woke up to chores in the morning, feeding geese, pigs, sheep, and chickens, and coming home from school to help with the endless vegetable gardening.

I have very fond memories of Olivet Elementary School. Although I remember it as having five rooms, I thought it was huge and crowded. It was a good introduction to life beyond the farm. After also attending Piner Elementary, I was off to Comstock Junior high in the city of Santa Rosa, where for the first time I met many people who had never fed chickens. As a child, I wanted to go to Piner high school because I could see each of the buildings had different colored doors. It looked like they would lead to someplace magic.

I think by the time I started Piner the doors were all painted blue. But they did lead somewhere magic: new ideas. I tell people everywhere I go about the teachers I had at Piner. Many made lessons so fun and memorable, I can recall them to this day. My coworkers at NASA know I can't do calculus without remembering Mr. Foote reading us Twisted Tales of Shakespeare during math exams, or look at a water molecule without bringing up Mr. Buff's H₂O Micky Mouse hat. I did a little set painting for the theater group, and very much enjoyed their fantastic energy and talent. I found out from Mr. Rathman that I enjoyed physics. At first, I wouldn't believe the laws and then I would go out and test them - only to find they would work every time. Not everything was fun; I remember taking a job aptitude test, and the answer: I would be a good mortician.

Cont'd. on page 2

Piner did not prepare me for everything: I left with a sad lack of understanding of bus systems and bureaucracy. When I took the train to college for the first time, I had directions to wait at a bus stop for the bus that would take me across town. I had no idea what one looked like! I waited on that corner for two hours until someone explained to me, I had to walk a few blocks over to the sign with a picture of a bus on it.

I did make it to college that day. There, I took physics again, and was given interesting homework assignments involving spaceships and planets and gravity. When we moved on to tiny particles and quantum mechanics, I asked the professor what happened to the problems with the big objects. He replied, "Oh, that's engineering. We don't have that here." Ironically, he was also the professor who would bring a television into the classroom so we could watch the space shuttle launches. Thanks to him, I figured out what I wanted to study, and also that I had to go somewhere else to do it. New York!

I did eventually get an engineering degree. During that time, I met two important people: my roommate Tess and my husband to be. With my new degree almost complete, I began the scary process of applying for jobs in a male-dominated field. (The ratio of men to women in my classes was 100:1). There were large gatherings of hiring managers called Job Fairs. I was overwhelmed by Job Fairs because there would be more people in one giant room than there were in my entire home town of Fulton, population 500, back then. I actually met a NASA engineer who offered to hire me, but later received a letter from NASA saying they weren't looking for people with my skills at that time. Here is where my lack of experience with bureaucracy led me to a misunderstanding. It didn't occur to me that everybody didn't know everybody else at NASA. The human resources person who wrote me that letter never spoke with the engineer who had a NASA job for me. I did something you should never do. I didn't ask to make sure.

Instead, I accepted a job at a chemical factory in the next state, an offer I got as the result of my sending out hundreds of resumes. Luckily, I did not have to work there for more than a year. My college roommate back in New York received a letter for me, mailed to my old address, from an

aerospace company. Tess knew from looking at the envelope it was an offer letter. She called the chemical company and spent 45 minutes on the phone until they finally connected her with me. I had her open the letter and read it to me, and we celebrated together from either end of the phone line. That was the beginning of my career in aerospace.

After this slow start, everything started to happen in a hurry. I moved to California to work on the solar arrays for the International Space Station, got married to my college sweetheart, and within five years we had two boys and a house. Because the Space Station had international partners, I met astronauts from Europe and Russia, and traveled for work to Japan and Houston. I have had the privilege of sampling air quality as a passenger in a small jet being tossed about like a toy in the powerful updraft of a huge forest fire. If all goes well next year, I will get to remotely operate a rover instrument seeking water on the moon.

Would you believe it? The most important skill to get the work that I really love is: persuasive writing! Thank you, English teachers. NASA has what are called competed missions, which involve teams writing large documents to persuade those with the budgets to hand them over. Competed missions are like beauty contests for ideas.

Cont'd. on page 4

Crab Feed

Unfortunately, our scheduled January 2022 Crab Feed has been canceled, due to the extensive work to prepare for it and the unpredictability of the Covid situation. But please mark your calendars for the return to our annual crab feed next year scheduled for January 28, 2023. The event is Piner's biggest fundraiser with proceeds shared by the Boosters, Foundation and Athletic Hall of Fame, raising thousands of dollars, supporting Prospector sports; providing grants to teachers for sustainable classroom equipment and supplies; and honoring past student athletes, teams and coaches. The crab feed is a reunion for many Piner graduates, as well as friends and families that gather to enjoy good times, while enjoying delicious food prepared and served by the Piner Culinary Arts Department.

Athletic Hall of Fame Induction Banquet

We have also made the decision to cancel our April 2, 2022, Piner High School Athletic Hall of Fame Banquet. As much as we dislike putting it off for another year, there is a lot of coordination pre-dinner to putting it on, e.g. who will attend if the Corona virus is still active, possible down payment losses if it's canceled just before the event, etc. We have scheduled it for next year April , 2023. Again we will formally be inducting the previously announced Class of 2020: Michelle Ferguson - Cross Country, Track and Soccer 1987- 1990; Faith Baggett - Girls Volleyball 1994-1998; Greg Alexander - Football & Basketball 2001- 2005; Derek Shaffer - Boys Soccer 2000-2004; Moises Medrano - Boys Soccer 2000-2004; and the 1985 Boys' Baseball Team. If you have never attended one of the Piner High HOF Banquets honoring past Piner outstanding athletes since 2006 at the Santa Rosa Golf and Country Club, you are missing out on a delicious dinner and memorable stories about these talented athletes.

2006 Piner Hall of Fame Committee: Front Row L-R Steve Casperson, Jim Lanz, Betty Castino, Jim Underhill, Jan Hansen. Back Row, Martha Menth, Dave Albritton, Lee Torliatt, Randy Nunes and Bob Zeni.

Cont'd. from page 2

“ Education is the most powerful weapon, which you can use to change the world.” Nelson Mandela

Thanks to being on the winning side of some of these contests, I have traveled to places on earth that are similar to the other planets in our solar system. I have lived in a tent on Devon, the most Mars-like Canadian island above the arctic circle, where we were practicing extraterrestrial ice drilling. I have helped simulate a life search rover mission in the Atacama Desert on the Chilean plateau. I get to fall asleep in the middle of nowhere, where the Milky Way forms a path across the night sky.

I might have left home not knowing about buses and huge companies, but I learned how to ask questions and look for the far horizon. And that was enough to lead me to a job I love. I wouldn't want to have grown up anywhere else. Thank you to all my teachers and friends from Piner!

I apologize to my English teachers for writing this autobiography in a hurry without time for edits. I do remember your lessons! Art, Biology, History, as well. to stay on topic. I had to leave out many threads, but I draw on these memories of my teachers and creative friends from Piner High School all the time. I hope you will remember along with me.

L to R, Arwen's mother, Arwen, Mr. Buff, Mr. Foote, & Mrs. Foote, September 2021.

THOSE NAMES IN BOLD PRINT HAVE RENEWED THEIR MEMBERSHIP FOR THIS SCHOOL YEAR.

Our Apology to Tom Hansen

In our September 2021 issue we posted the below picture and wrote about this article in the Press Democrat during the Fall of 1968. Four Piner High students were denied attendance at Piner High until they cut their long hair and shaved their facial hair, per the school district's dress code. The picture of the students only listed their last names, but with some research we identified them as Steve Brelsford, John Andersen, Tom Hansen and Jim Scnelle.

Shortly after we published that article, we were contacted by Tom Hansen, (class of 1971 and team member of multiple PHS Championship swim teams), who corrected us and said it was his older brother, John Hansen (class of 1969) who was in the picture, not Tom. Our apologies to Tom, and a thank you to John Anderson (owner of SoulShine Studios in S.R.), who brought it to our attention about this article and how times have certainly changed.

Take care of your body and your mind, One struggles to survive without the other!

Sarah Tait continues her record breaking scoring for Piner's Girl's Basketball.

In May 2021, Sarah Tait (above in the yellow T-shirt) a junior at the time, became the first Piner girl to score over 1,000 career points for girl's basketball. She is the team Captain, MVP player and has a 4.0 GPA. See below for the teams Fall 2021 start.

Tait gets Piner off to hot start

After setting the Piner girls career scoring record in the spring, Sarah Tait has taken her game up a level this winter. The 5-foot-7 senior guard is currently averaging 28.3 points and 7.3 rebounds per game, which has Piner (8-1) off to its best start to a season in recent memory.

Tait has eclipsed the 30-point mark four times already this season and is sitting at 1,294 career points after the Prospectors finished third in the Gold Rush Classic over the weekend. She became the first girls player in school history to pass the 1,000 career point mark back in May when she dropped 33 points against Healdsburg.

She has her sights set on loftier goals for her final prep season. "I think that was just my first milestone and I'm looking to push past that in high school and hopefully beat the boys scoring record for our school," she said.

Luke Devenney owns that record at 1,651 points. With 17 regular-season games remaining, Tait could have a chance at breaking that mark later in the season if she can continue to score at this high rate.

Tait and head coach Marc Anderson also hope that this hot start carries into the rest of the season. Anderson is encouraged by what he's seen so far, especially considering the Prospectors have yet to be at full strength for any extended length of time. "We've stuck together," he said. "We've all played hard for one another, and to have a record like this, that's what, for me as a coach, has impressed me the most about the girls. They've stuck together through thick and thin to get to this point, and we haven't even had our team available yet."

*You can reach Staff Writer Gus Morris at 707-304-9372 or gus.morris@pressdemocrat.com.

PINER HIGH FOUNDATION

In September 2021 we funded nine teacher grants for a total of \$3,046. The grants included purchasing English books for classrooms, Science manipulatives for students visual & physical understanding, P.E. weight bar clamps for student's safety, and more.

The students and teachers greatly appreciate the Foundation's ability to fund their requests. A few examples are English teacher **Sarah Walls** wrote, "Thank you so much. I am continually amazed at the generous support of this group. I am excited to use all of these resources in my classes this year and following years." Science teacher **Michael Converse** wrote, "Thank you for offering us this opportunity and for your continued support at Piner High School. Math teacher **John Williams** said, "Thank you again for your support!" And English teacher **Karen Coster** said, "I received the box of books yesterday and am delighted! They are in the library now getting processed and will be available soon to the students. Thank you so much."

Thank you to all of you who recently renewed your membership and those that just became members. Many of you added an additional donation amount along with your membership. We also received a \$1,000 donation from someone who wished to remain anonymous. We can't thank that person enough, as well as all of you for your renewals and additional donations up to help fund our Bob Zeni Teacher Grant Program. Since we were not able to have our annual crab feed fundraiser for last year 2021 and for this year 2022, your membership renewals and extra donations are very helpful. These have been difficult times for many of us, emotionally and financially. So each and every donation is greatly appreciated. With that said, thank you to those that recently renewed their membership who are: **Dolores Seymour, Larry Olenberger, Jani Krambs, Marylou Beltrami, Vince Klein, Ursula Juricich, Tom Nix, Steve Temple, Martha Messana, Joel Jacobsen, Judy Bagley, Ruth Richmond, and Nancy Celms.**

An Extra Thank you to those who recently renewed their membership and gave an extra generous donation. They include the **Anonymous person, Leslie Conant, Wayne Rasmussen, Bob Zeni, Margaret Nelson, Dale Solheim, Chris Garcia, Dorothy Gong Parker, Joan Fleck, Jake Fitzpatrick, Randy Palmer, Mike Daniels, Edna Gaddie, Lee Ann Reuter, Randy Nunes, Cathy Slack, Carol Sherwood, Marsha Richter, Pete & Jill McCormick, Jill Thach, Sam Salmon, Charles Albright and Sam Bertacco.** We welcome new member, **Collen Pugh**, a 1978 grad with a PHD and currently is the Vice Provost for Research, Dean of the Graduate School, Professor Department of Chemistry, at Wichita State University. The Piner High Foundation is very proud of her and of all the other many successful graduates who have work to make the world a better place. Way to go Prospectors!

If you are interested in becoming a Piner High Foundation Board Member and helping please call 571-7420 and leave a message so we can call you back. The Piner High Hall of Fame and the Piner High Boosters are also looking for Board Members, as all three organizations are being run by below the minimum number of board/committee members, and are seeking replacements. If you have a couple of friends or more who you would enjoy working with, and live in the Santa Rosa area or a short commute to Santa Rosa, it is a rewarding experience helping out your alma mater.

"Let us think of education as the means of developing our greatest abilities, because in each of us there is a private hope and dream which, fulfilled, can be translated into benefit for everyone and greater strength for our nation."

- John F. Kennedy

We recommend you go to Piner High Schools website or Google these programs to get further information about their **SPARQ (Science Position Astronomy Research Query) Center** and their **STEM (Science Technology Engineering and Math)** programs. These are excellent programs for students to be expose to some of these classes or for those who want to go through the four year certificate program. The public is also able to enjoy these facilities by way of the **STEM CAFÉ** and **SPARQ CENTER** presentations which generally are once a month in the evenings during the school year. Go to the SPARQ Center's Calendar to see upcoming presentations for the public. It is on a first come/first served basis, with limited space. Covid Mitigation: Due to Covid, they are limiting the shows attendance to **35 guests (Planetarium Shows)** and **50 guests (STEM Cafés)**.

Masks are required.

They will have 3 Medify Air Filtration units and MERV 13 HVAC filtration on at all times. These requirements are in effect until further notice.

-STEM Certificate Level 1 Approved-

Each presentation is approximately 75 minutes.

All shows begin @ 7pm sharp in the SPARQ Digital Theater Planetarium. Free to everyone!

Piner's SPARQ Center with Planetarium, Classroom and the Observatory in back.
